

Epidemiological study on the current status of patients with type I Gaucher disease in Spain, as assessed by the Therapeutic Goals MAP (Monitor, Action and Progress) Tool©

Estudio MAPPING EG

Dr. Jordi Pérez López
Errores Congénitos del Metabolismo
Servicio de Medicina Interna
Hospital General Universitario Vall d'Hebron

► Therapeutic Goals MAP Tool (Monitor, Action & Progress)

- Standardized tool to manage and follow up the disease
- It provides an easy management framework for the identification and mapping of therapeutic goals
- Individual data from patients
- It consists of data from all patients
 - To assess their health status at individual level
 - To study the different management among the centers
 - To strengthen and improve the labour of physicians
- It may permits the evaluating of response to new therapies and to unify diagnostic criteria and therapeutic decisions

► Main variables and therapeutic goals for the study

MAP-Tool	Therapeutic goals (achieved if...)
Haemoglobinaemia	≥12 g/dL in men/ ≥11 g/dL in women/children
Trombocitemia	≥120 10^9 /L
Splenomegaly	≤8 MN**
Hepatomegaly	≤1.5 MN**
Bone pain in the last 24 h	≤1
Bone Mineral Density	≥-1
QoL	≥70
Additional measure:	
MAP-Tool Index*	Number of therapeutic goals achieved

* MAP-Tool Index: Sum of all the variables from the MAP-tool (0-70) after their transformation:

1. Results expressed in the same direction (the higher the best) and
2. Re-scaled each one into a 0 to 10 scale

** MN = Multiples of Normal

► Study Description

- Epidemiological, cross-sectional, descriptive & multicenter study.
- Gaucher type I disease patients managed in specialized centers in Spain.
- The study was presented for classification to the Spanish Agency of Medicines and Sanitary Products (AEMPS) in mid 2011.
 - Classified as EPA-OD (Post-Authorization study – Other Designs → non prospective follow-up) despite being expected No-EPA.
- As consequence of this classification, study start-up was delayed few months due to Spanish regulations.
- Recruitment Period: June-December 2012.

► Inclusion/exclusion criteria

Inclusion criteria

- Patients with Gaucher disease I who attended the investigator's office for their routine revision
- Patient who signed the Informed Consent.

Exclusion criteria

- Patients who, after the criteria of the investigator, they were considered to have limited cognitive or sensorial abilities or showed psychiatric or linguistic barriers which impair their capacity to respond the CRF.

► Study variables I

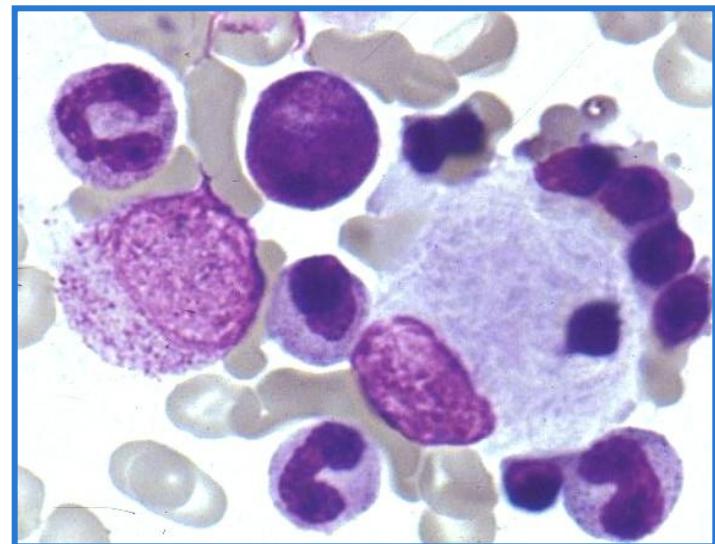

Therapeutic domain	Parameter	
	Adults	Children (≤ 18 años)
Anaemia	12 (g/dl) for males 11 (g/dl) for females	11 (g/dl) for children ≤ 18 años
Thrombocytopenia	120 (109/l)	120 (109/l)
Splenomegaly	8 s	8 s
Hepatomegaly	1,5 h	1,5 h
Bone pain in the last 24 h	VAS=1	VAS=1
Bone Mineral Density	Z=0	Z=0
QoL	70	70
Paediatric patients: growth		Mid parental percentile

► Study variables II

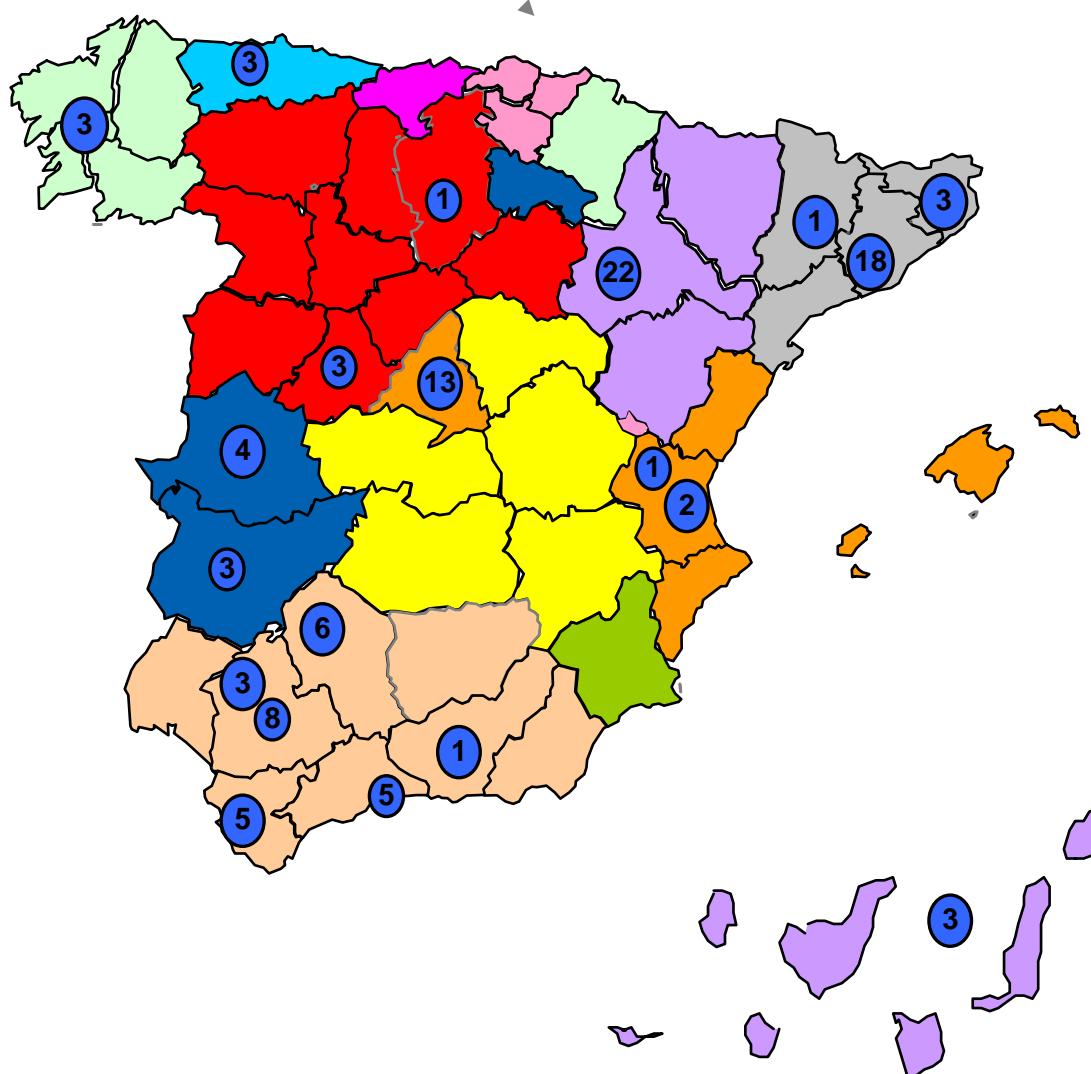

Características generales	Treatment	Other
Gender	Dose (U/kg)	Antibodies
Age	Dose frequency (dose/month)	Co-morbidities
Height (m)	Treatment name	Transfusion dependency
Weight (kg)	Treatment at home	Bleeding tendency
Age symptoms onset (DD/MM/YYYY)	Time since first treatment (months)	Pre-existing bone complication
Age of diagnosis (DD/MM/YYYY)	Co-medication related to GDI	Osteonecrosis
Familial history of Gaucher Disease	Infusion related Reactions	Pulmonary involvement
Gravid and para	Adverse events	Neurological symptoms
Genotype		MRI assessment
CHITO (nmol/mL x h)		Onset of puberty – Tanner scale
CHITO ("mutational status")		Mental status
CCL18 (ng/mL)		

Epidemiological study on the current status of patients with type I Gaucher disease in Spain, as assessed by the Therapeutic Goals MAP (Monitor, Action and Progress) Tool©

RESULTS

Centers participants

- 108 patients
- 28 Centers / 35 Investigators recruited patients
- 10/17 Autonomous Communities (CCAA)

Investigators and centers

Recruitment according to the known incidence by CCAA:

- Andalucía (28)
- Aragón (22)
- Cataluña (22)

Therapeutic goals

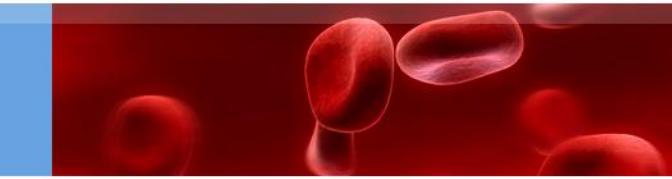

MAP-Tool	Therapeutic goals (achieved if...)
Haemoglobinaemia	$\geq 12 \text{ g/dL}$ in men/ $\geq 11 \text{ g/dL}$ in women/children
Trombocitemia	$\geq 120 \times 10^9 / \text{L}$
Splenomegaly	$\leq 8 \text{ MN}^{**}$
Hepatomegaly	$\leq 1.5 \text{ MN}^{**}$
Bone pain in the last 24 h	≤ 1
Bone Mineral Density	≥ -1
QoL	≥ 70
Additional measure:	
MAP-Tool Index*	Number of therapeutic goals achieved

* MAP-Tool Index: Sum of all the variables from the MAP-tool (0-70) after their transformation:

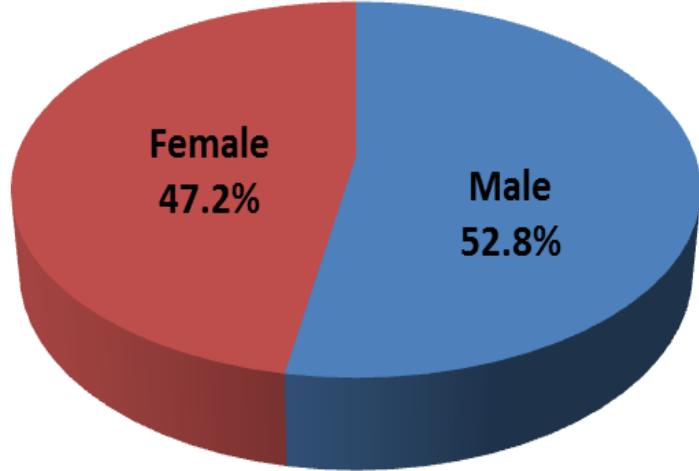

1. Results expressed in the same direction (the higher the best) and
2. Re-scaled each one into a 0 to 10 scale

** MN = Multiples of Normal

Summary

- **MAP tool provides an easy management framework to manage and follow up the disease**
- **On an heterogenous GD I population, data has shown:**
 - Good Hb control (97.2%)
 - Good hepatomegaly control (87.8%)
 - Good splenomegaly control (87.0%)
 - Good platelets control (75%)
 - Physical component of SF-36 (PCS \geq 70): (63.1%)
 - Bone mineral density (Z-score \geq -1) (64%)
 - Bone pain achievers (VAS \leq 1) (53.2%)

Conclusion

- MAP tool provides an easy management framework to manage and follow up the disease
 - Control is done properly in most objectives
 - However only 65 patients registry information on the 7 goals
 - 33 patients (10 splenectomized) lacking BMD analysis
 - Harmonization of data collection between different centers would be necessary

Gracias
